Forecast for Sunday 10 Nov 2024

Weather: Widely cloudy during the day with isolated drizzle and persistent hill fog affecting many mid-high slopes and some lower slopes, especially in the west. There is a chance that the highest peaks could lie just above the low cloud layer at times during the morning and early afternoon. Cloud thickening in the evening with some more widespread, mainly light rain arriving from the northwest.

Chance of cloud-free hill tops above 600m: 10% in the west. 30% in the east.

Low cloud and visibility: Widespread cloud bases 300-400m across the west of the Park, local breaks to around 600m. In the east, widespread bases 300-500m, occasionally 600m this afternoon with isolated breaks. Chance of low cloud layer topping out at 750-850m at times. Hazy this morning, improving to become good in the afternoon, but locally poor in any drizzle.
